

## **No Budget for Infrastructure? How Total Enforcement™ Revolutionized an Agency**

Just a few short months ago, Total Computer began planning its first implementation of Total Enforcement 2 (TE2) on the Windows Azure Cloud for the East Hampton Town Police Department (EHTPD). Today, the EHTPD is the first RMS/CAD live on the Cloud. This transition essentially moved the department off of traditional servers and onto the Cloud for the purposes of data hosting; thus, reducing upfront or maintenance costs associated with servers. Along with the upfront cost savings, the transition to the Cloud is both seamless and quick making it possible to transition an agency/department overnight.

Microsoft recently published a Case Study on EHTPD's move to the Cloud. Click [here](#) to read the Microsoft Case Study.

Along with the upfront cost savings from the move to the Cloud, the EHTPD has seen the following benefits from using TE2:

- Increased officer and overall public safety
- Reduced data entry resulting in faster record creation and error reduction
- Real-time information with strong geospatial analysis
- Greater reporting features
- Improved productivity – much of it from the ability to work offline in a mobile environment

TE2 is also currently hosted at the Microsoft Executive Briefing Center in Brussels and has been qualified as an enterprise-class, Cloud-based solution, enabling unprecedented scalability.

For more information about moving to the Cloud and the cost savings for your department/agency, call (631) 777-7477 or email [info@totalenforcement.com](mailto:info@totalenforcement.com).
