The Superior Court of the Virgin Islands awards a contract to implement an electronic court case management system to AMCAD.

St. Croix, Virgin Islands, December, 2010 – AMCAD® announced today that the Superior Court of the Virgin Islands awarded a contract to American Cadastre, LLC (dba AMCAD) for the implementation of an electronic court case management system (AiCMS). AMCAD was selected over two other vendors by the Superior Court.

The Superior Court of the Virgin Islands is the trial court in the territory, which includes St. Thomas, St. Croix and St. John. The court was established in 1977 as a territorial court and was reorganized in 2004 to the Superior Court of the Virgin Islands. The Court is one of general jurisdiction, handling over 35,000 cases per year.

“AMCAD’s integrated case management and web portal system featuring e-filing, when installed and operational, will further the vision of the Superior Court of the Virgin Islands to provide a state-of-the-art paper-on-demand system, using the latest technology, to provide better customer service to the citizens of the Territory,” said Presiding Judge Darryl Dean Donohue, Sr. “The new system is part of our ongoing efforts to reduce case delays, improving access to justice for our citizens, and improving our records management. The successful implementation of AMCAD’s system will be the culmination of automation projects taking place in the office, creating one of the most modern and sophisticated operations in the court’s environment today.”

AMCAD's AiCMS system will automate the entire Superior Court operation, including case management, financial processing, scheduling, role-defined dashboards and document management. Additionally, the new system will include a web portal incorporating e-filing that will provide the capability to electronically file documents and access records via the web, a process that will serve the practicing members of the Bar and provide more ready access to Court records for members of the public. AiCMS also improves staff productivity and accountability, and further streamlines office workflow by sharing information throughout the Clerk's operation. The AiCMS system utilizes the latest Microsoft .NET technology, providing the court the ability to protect its investment in technology. The solution allows for remote access for the public to view case and calendar information. This unique access, provided only by AMCAD, saves thousands of manual work hours per year. The AMCAD project will be implemented in the Superior Court of the Virgin Islands over the next 18 months.

"AMCAD is thrilled to assist the Superior Court of the Virgin Islands with the implementation of a court case management system that features the electronic management of documents," said Visagar Shyamsundar, AMCAD's Chief Operating Officer. "We are very excited and committed to implementing a state of the art solution that will improve the court's operations and provide better access and service to the people of the Virgin Islands."

AMCAD, based in Herndon, VA, has provided solutions and services to government agencies for more than 24 years. AMCAD is a "full service" company dedicated to automating records for government and business. AMCAD offers an array of solutions for government offices for Court Management Systems, Jail Management Systems, e-Filing Systems, Rapid Online Access Method Web Portal (ROAM), Land Records, Vital Records, and County-wide solutions for automating and converting records to on-line systems.
